

Accident cases and preventive measures in high voltage demand equipment

Kami Kozaburo

Safety Inspection Group, Business Department
Kyushu Electrical Safety Inspection Association

Table of Contents

1. Form of equipment of the high voltage demand equipment in Japan
2. Major accident cases and preventive measures in electrical equipment
3. Increasing inspection efficiency

[Official mascots of Kyushu Electrical Safety Inspection Association]

[Little Safety Inspection]

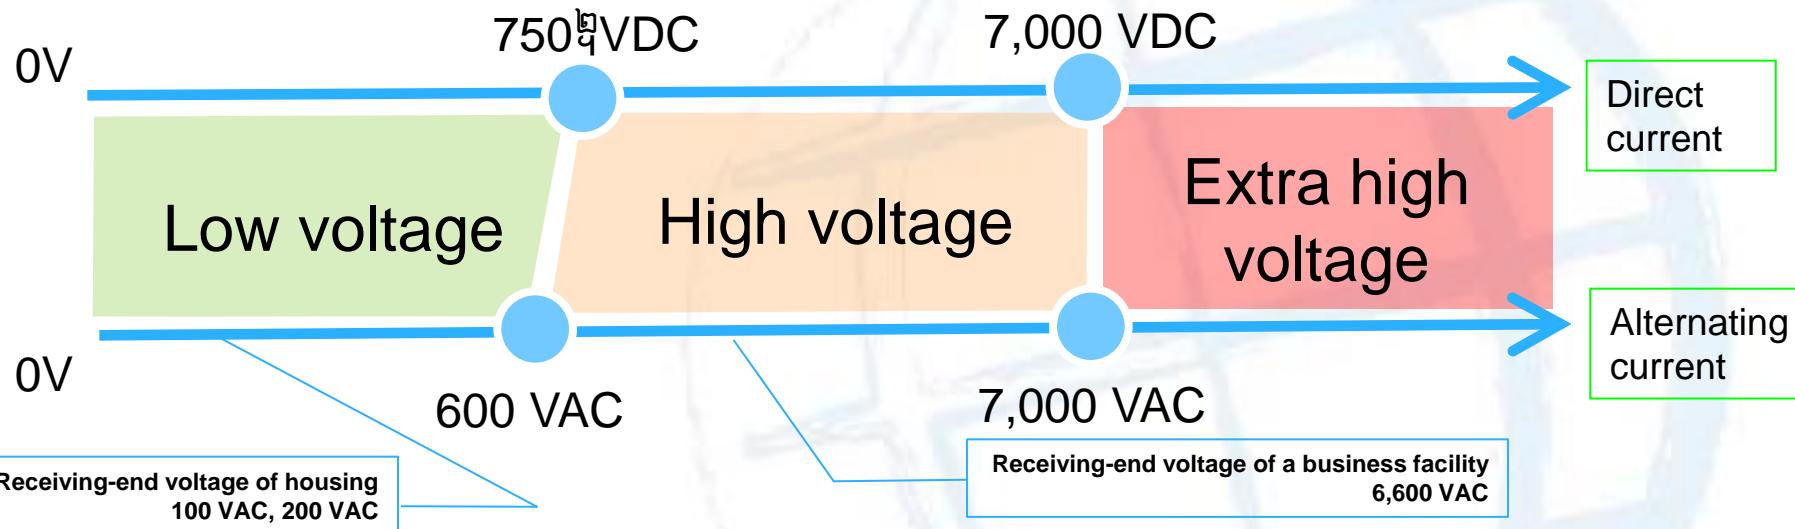

[Little Observation]

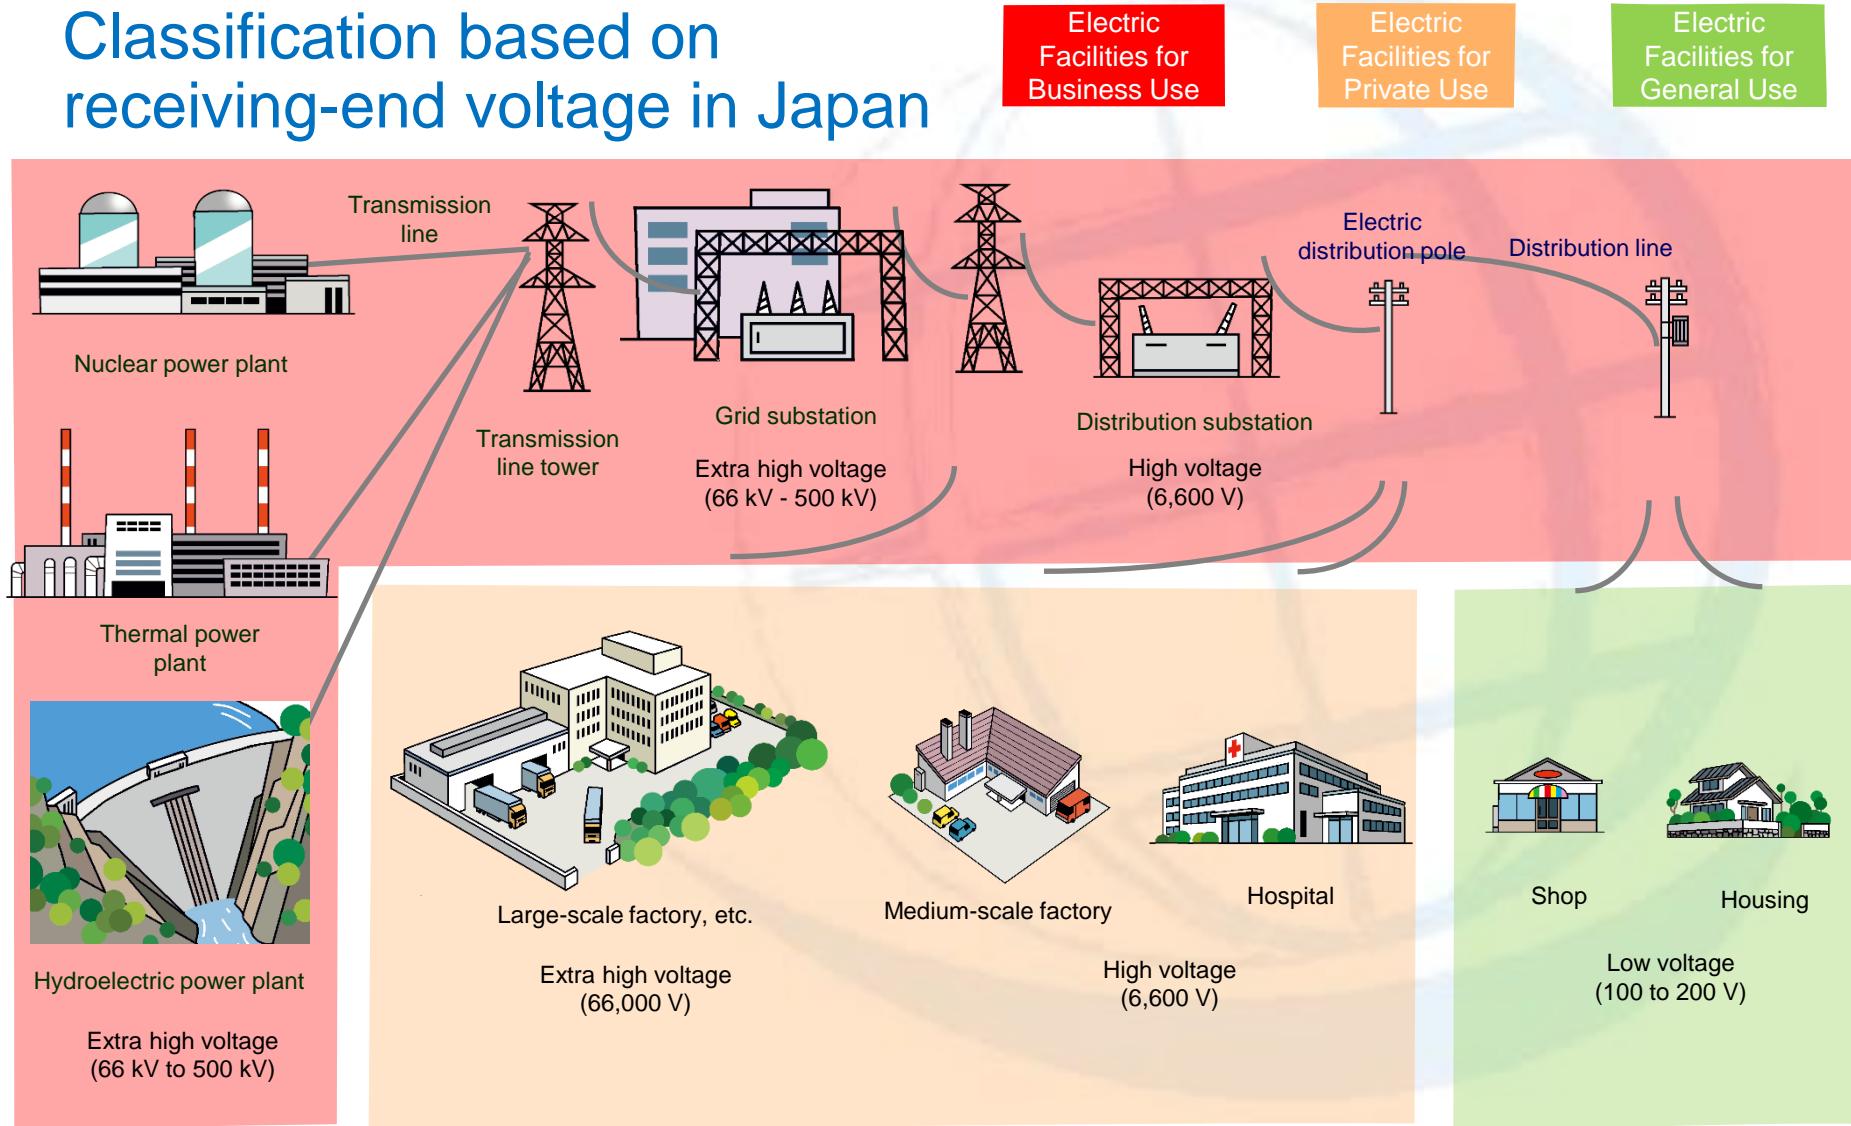

[Electrical Leakage]

1. Form of equipment of the high voltage demand equipment in Japan

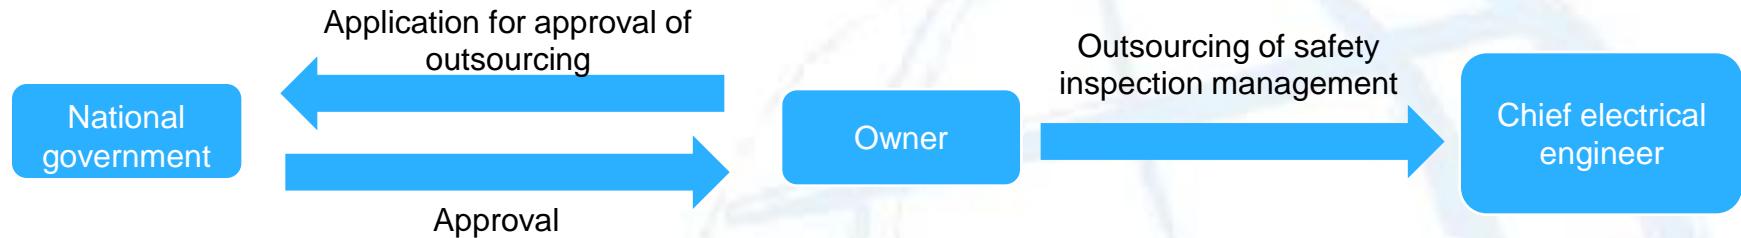

Classification based on receiving-end voltage in Japan

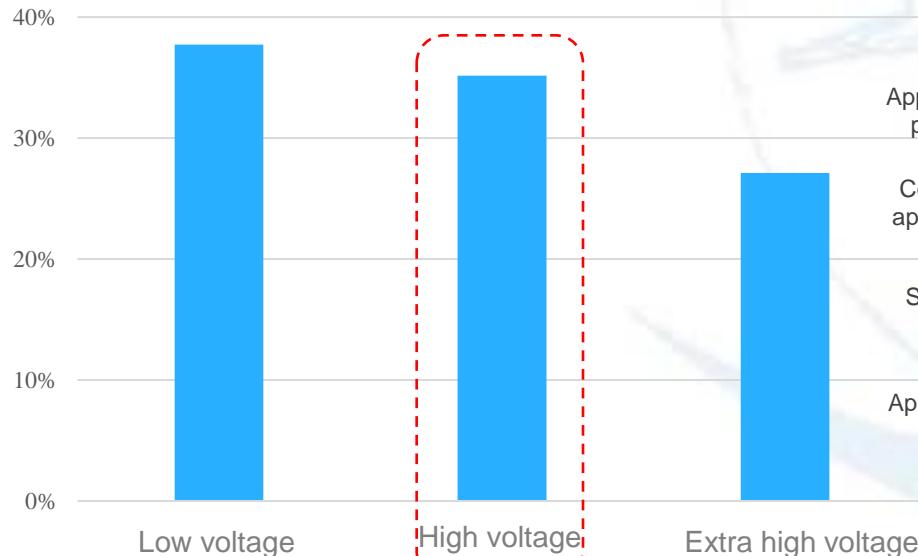

Classification based on receiving-end voltage in Japan

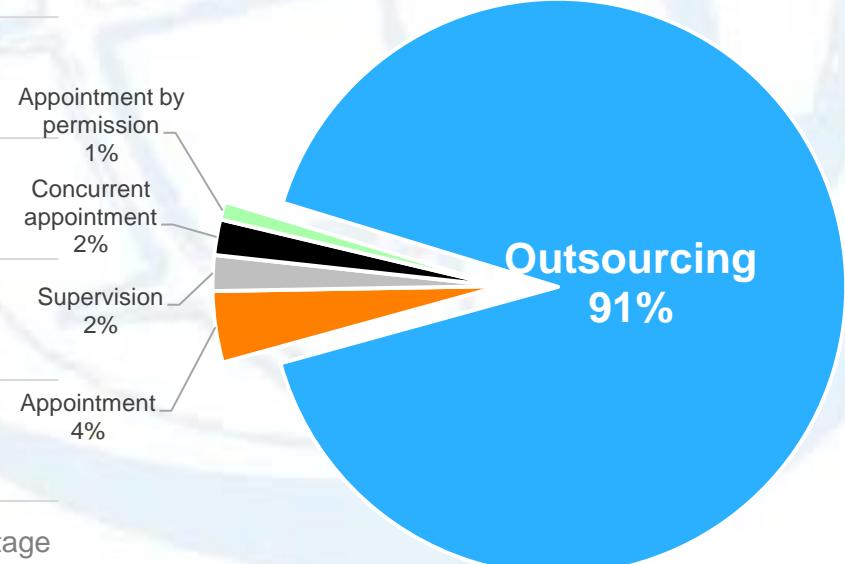

Outsourcing system of high voltage demand equipment inspection

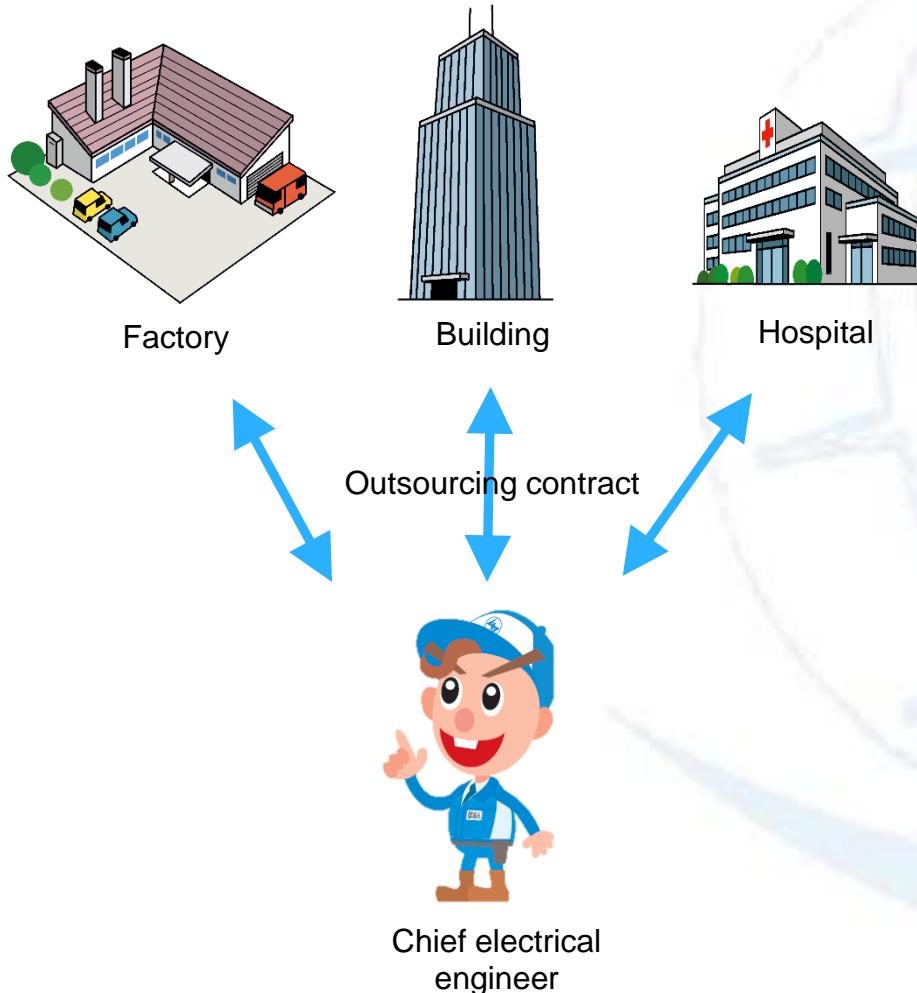

Electrical energy demand according to voltage category

Details of appointment mode

Outsourcing system of high voltage demand equipment inspection

- (1) With 3 years or more of practical experience (attendance on lecture meetings)
- (2) The chief electrical engineer performs inspection by him- or herself, and as for the number of pieces of equipment of which each engineer can be in charge, the total score of the values calculated based on the types and sizes of electrical equipment is less than 33 .
- (3) Equipment interconnected at high voltage (7 kV or less)
- (4) The output of the power generation equipment for which outsourcing can be done is as listed in the table below.

Solar power plant, energy storage plant	Less than 5 MW
Thermal power, hydroelectric power, and wind power plants	Less than 2 MW

Mode of demand equipment in Japan

[Demand equipment installed on an electric pole]

[Demand equipment in a common tenant building (8 story)]

fisuel seminar – 15 and 16

[Demand equipment in one of the most popular convenience stores in Japan]

Mode of demand equipment in Japan

[Demand equipment of the open frame type]

[Demand equipment of the cubicle type (front)]

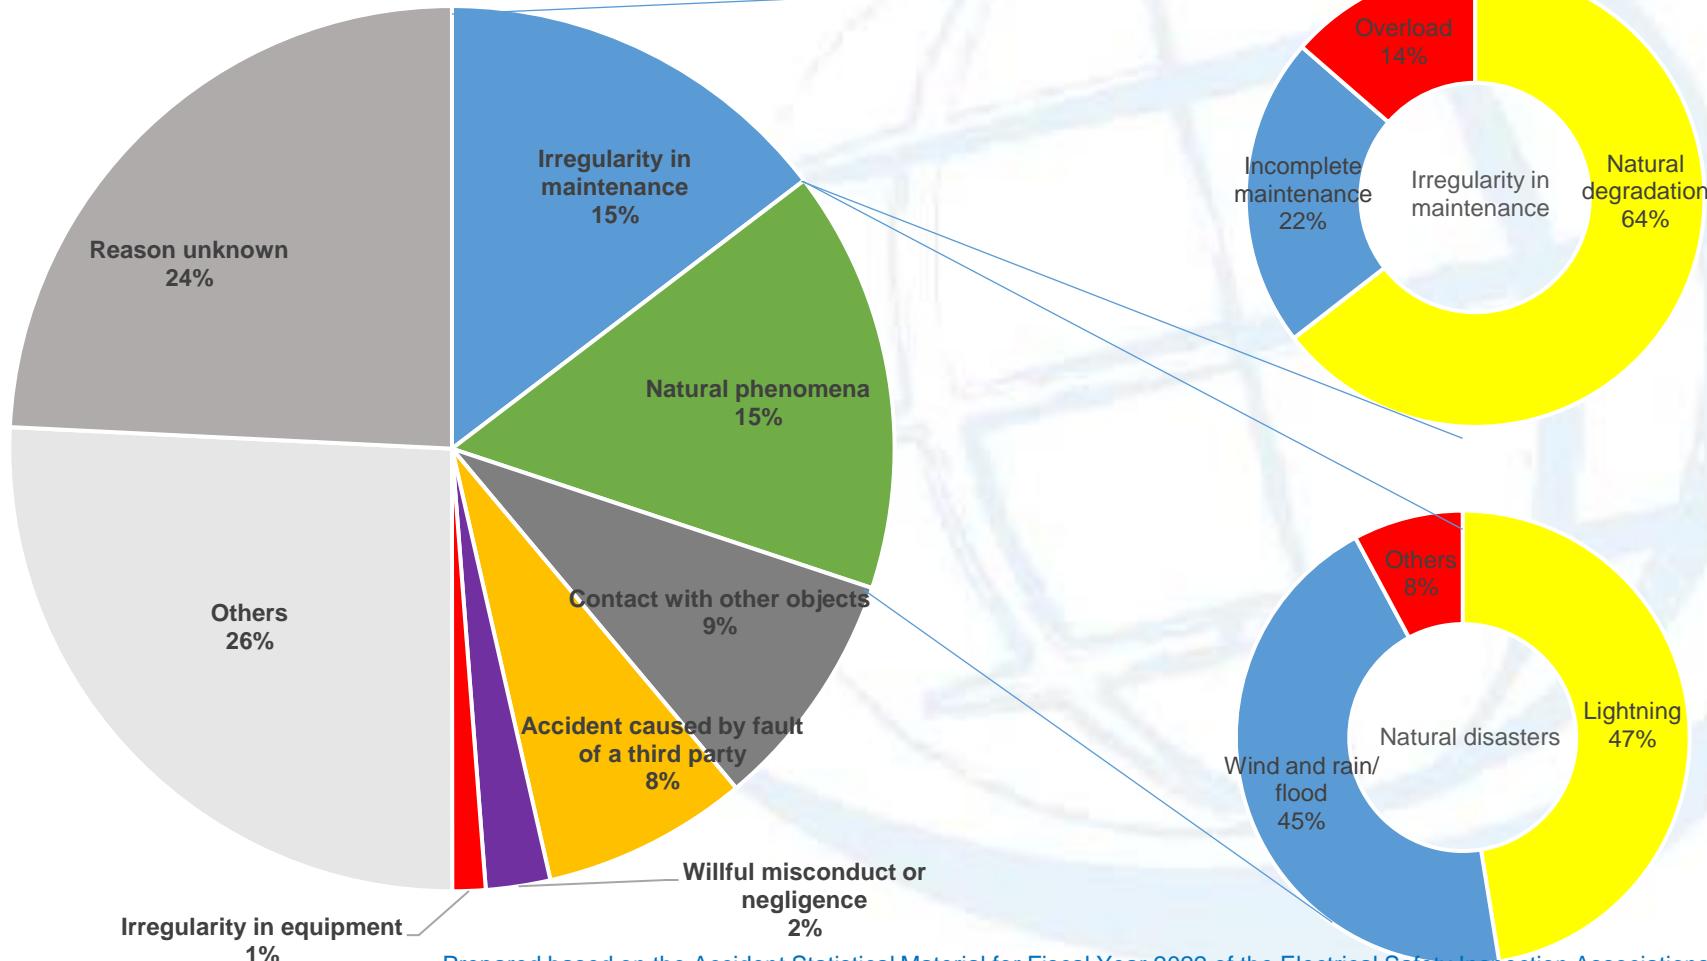

[Demand equipment of the cubicle type (back)]

A faint, large watermark-like graphic is centered in the background, consisting of several overlapping electrical symbols. These include a three-phase power symbol (three circles connected to a central point), a single-phase plug, and various lines and nodes representing electrical networks or circuits. The symbols are rendered in a light blue-grey color.

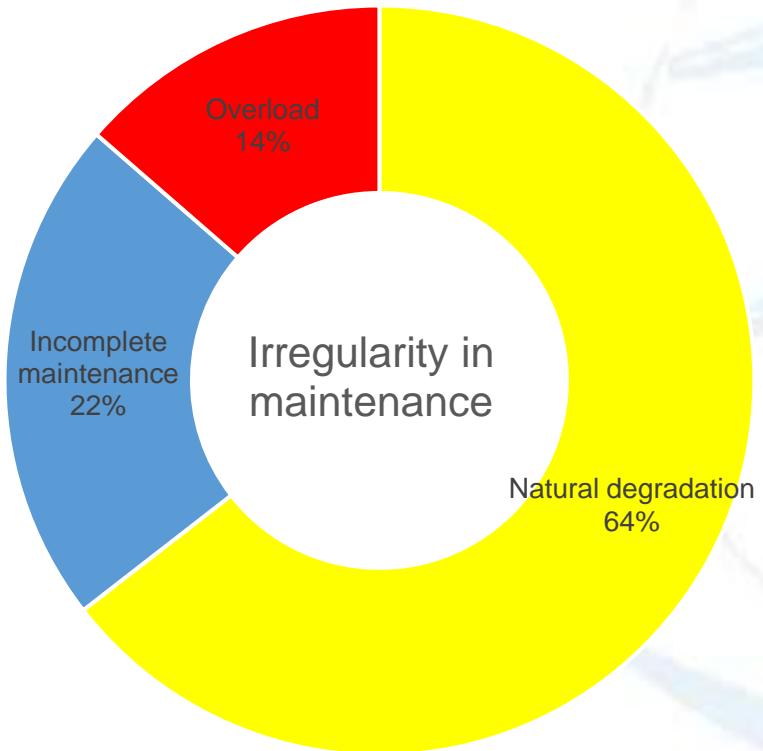

2. Major accident cases and preventive measures in electrical equipment

Ratios of electrical accident occurrence

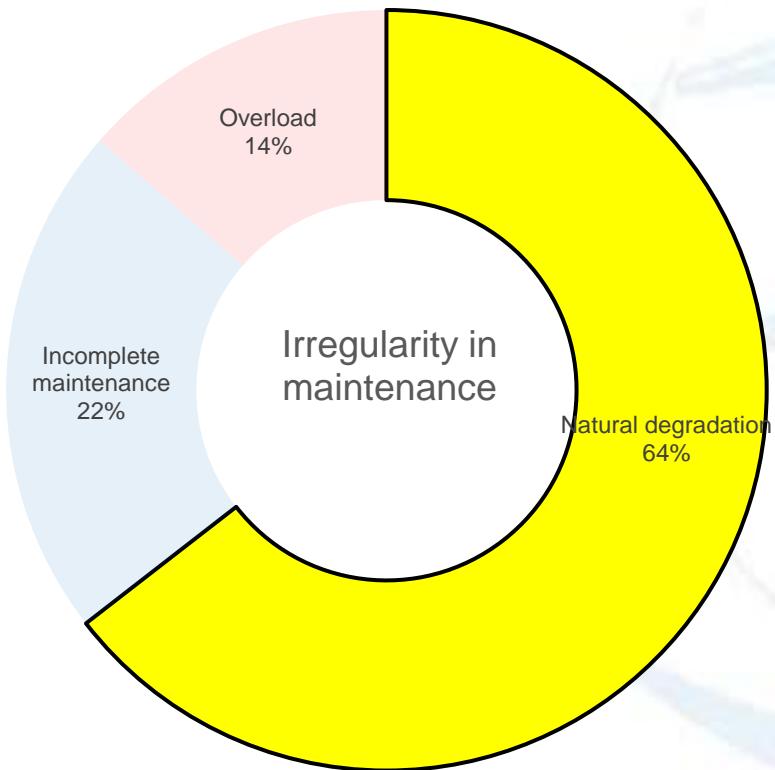

Prepared based on the Accident Statistical Material for Fiscal Year 2022 of the Electrical Safety Inspection Associations in Japan

Cases of accidents caused by irregularity in maintenance

Cases of accidents caused by irregularity in maintenance

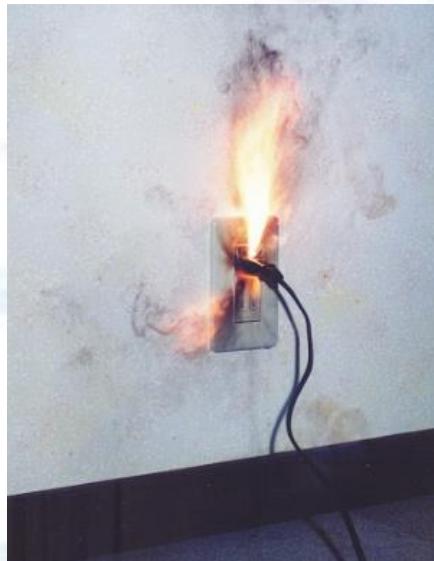

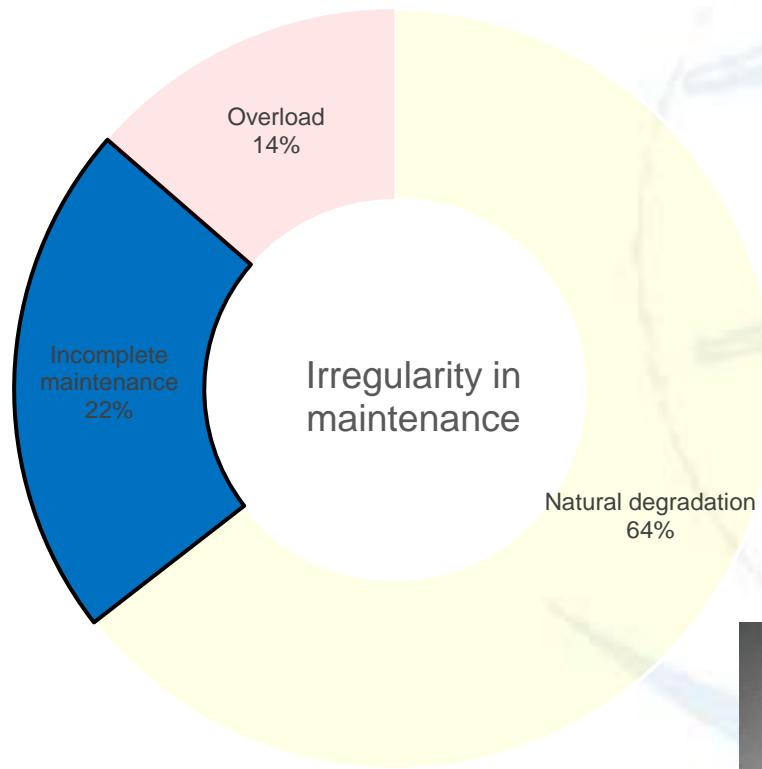

Fuse burnout due to degradation over time

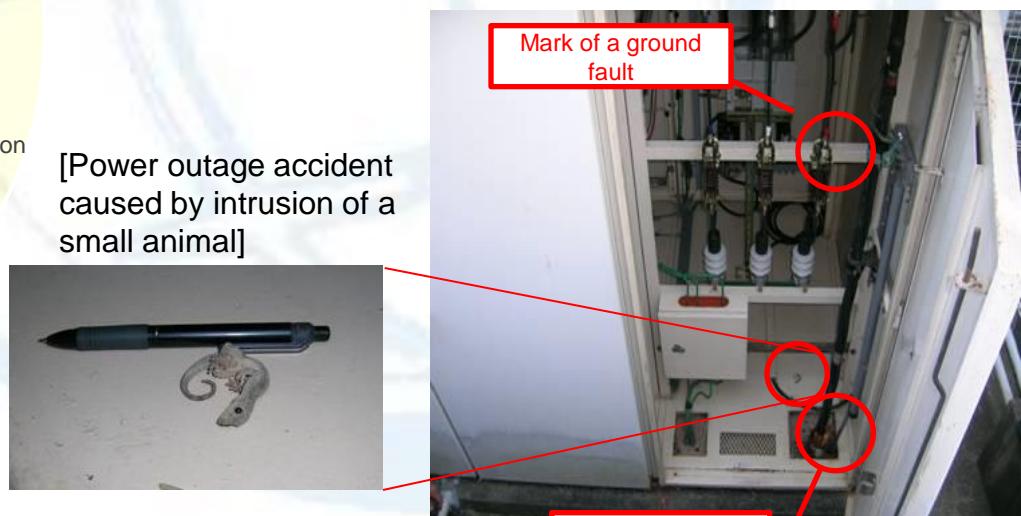

high voltage CV cable electrical breakdown (burnout)

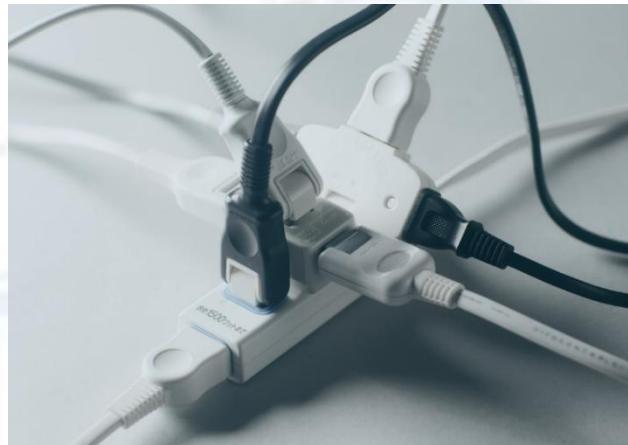

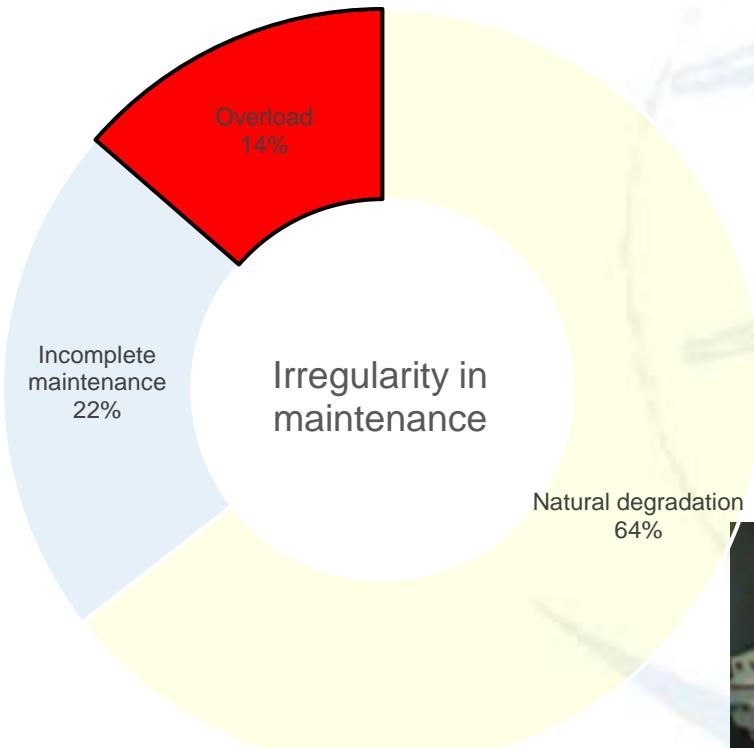

Cases of accidents caused by irregularity in maintenance

[Octopus wiring exceeding the rated capacity]

[Heated circuit breaker caused by overload]

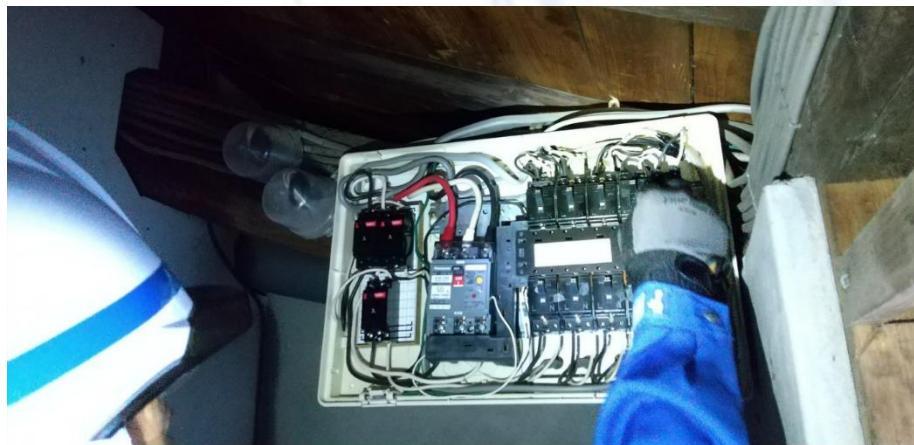

Preventive measures against accidents caused by irregularity in maintenance

[Replacement of a defective outlet]

[Retightening of circuit breaker connections]

fisuel seminar – 15 and 16 October 2024

[Inspection of a distribution board]

Preventive measures against accidents caused by irregularity in maintenance

[Precision inspection by disconnecting demand equipment]

[Measurement of insulation resistance of electrical circuits]

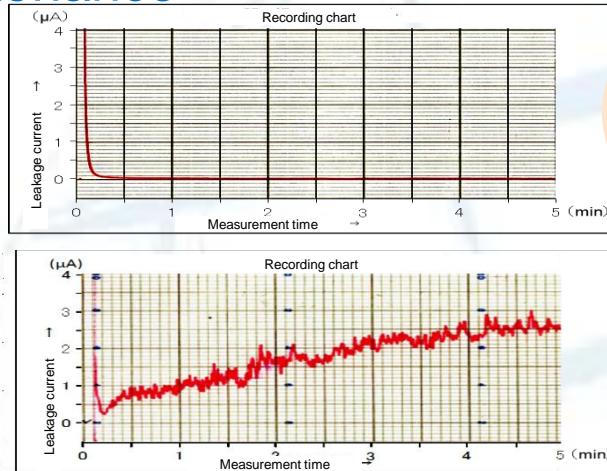

fisuel seminar – 15 and 16 October 2024 [Inspection and cleaning of electrical equipment]

Preventive measures against accidents caused by irregularity in maintenance

[Precision inspection of a high voltage CV cable]

Good result

Poor result

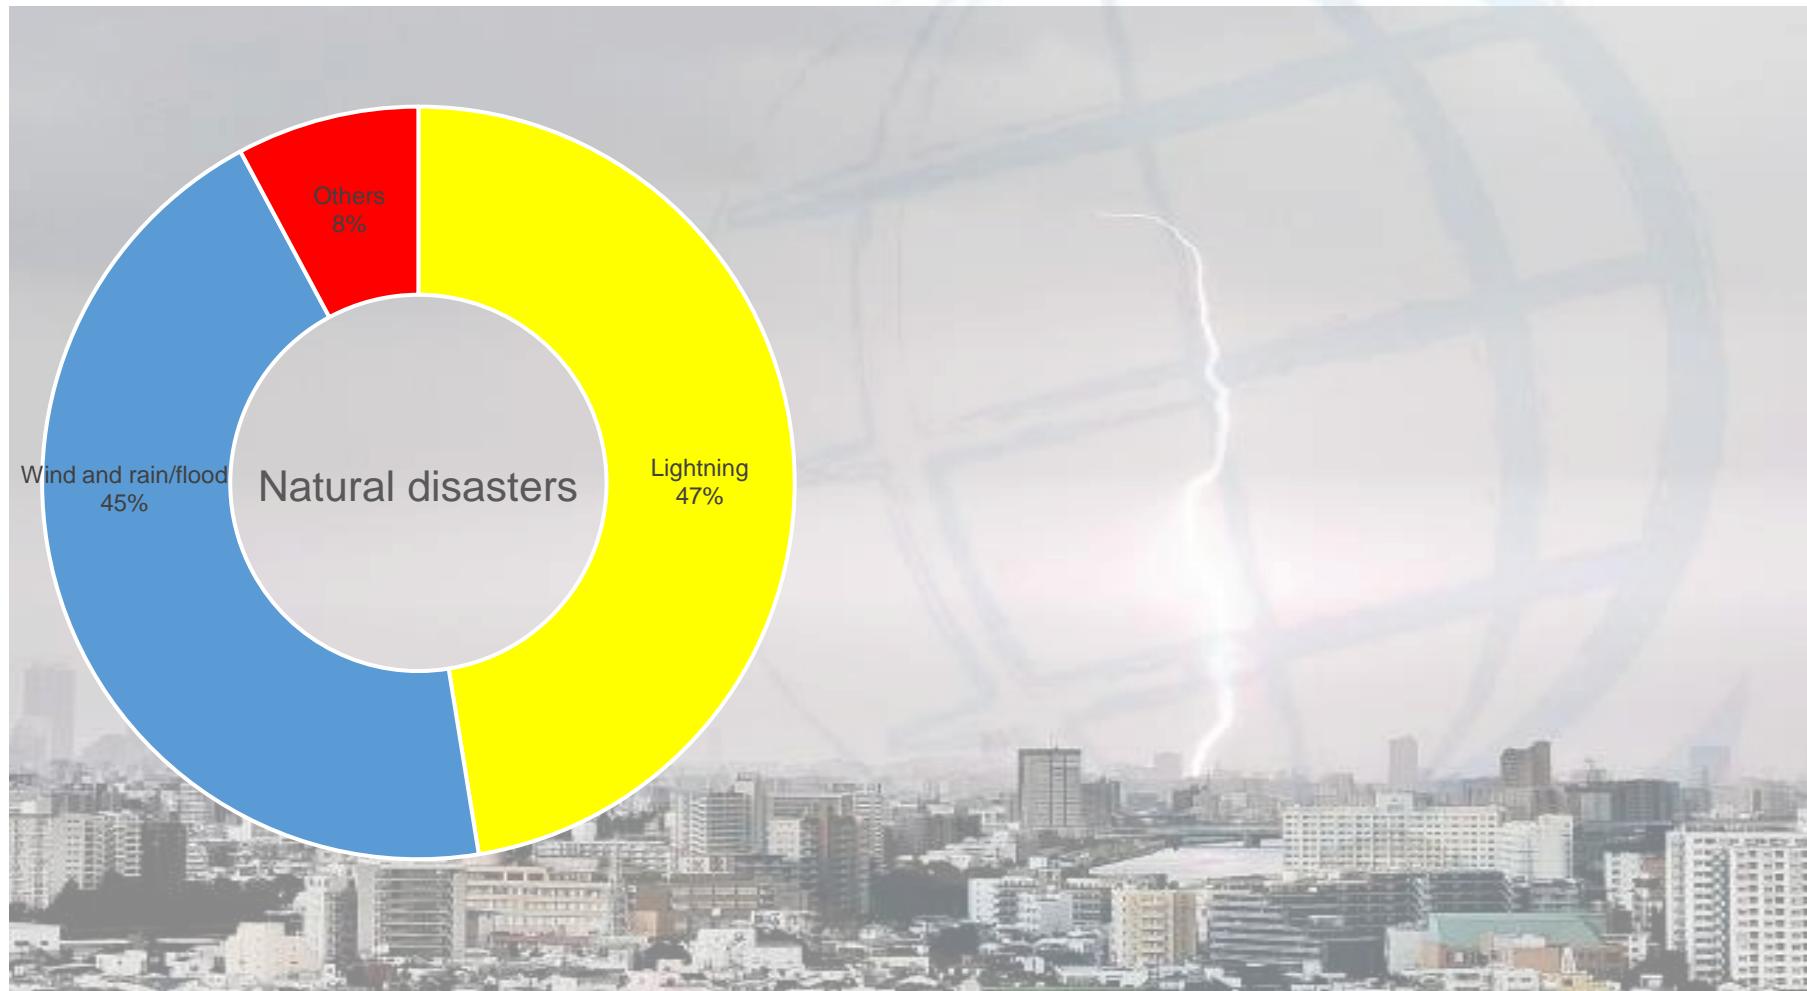

[Maintenance of a circuit breaker]

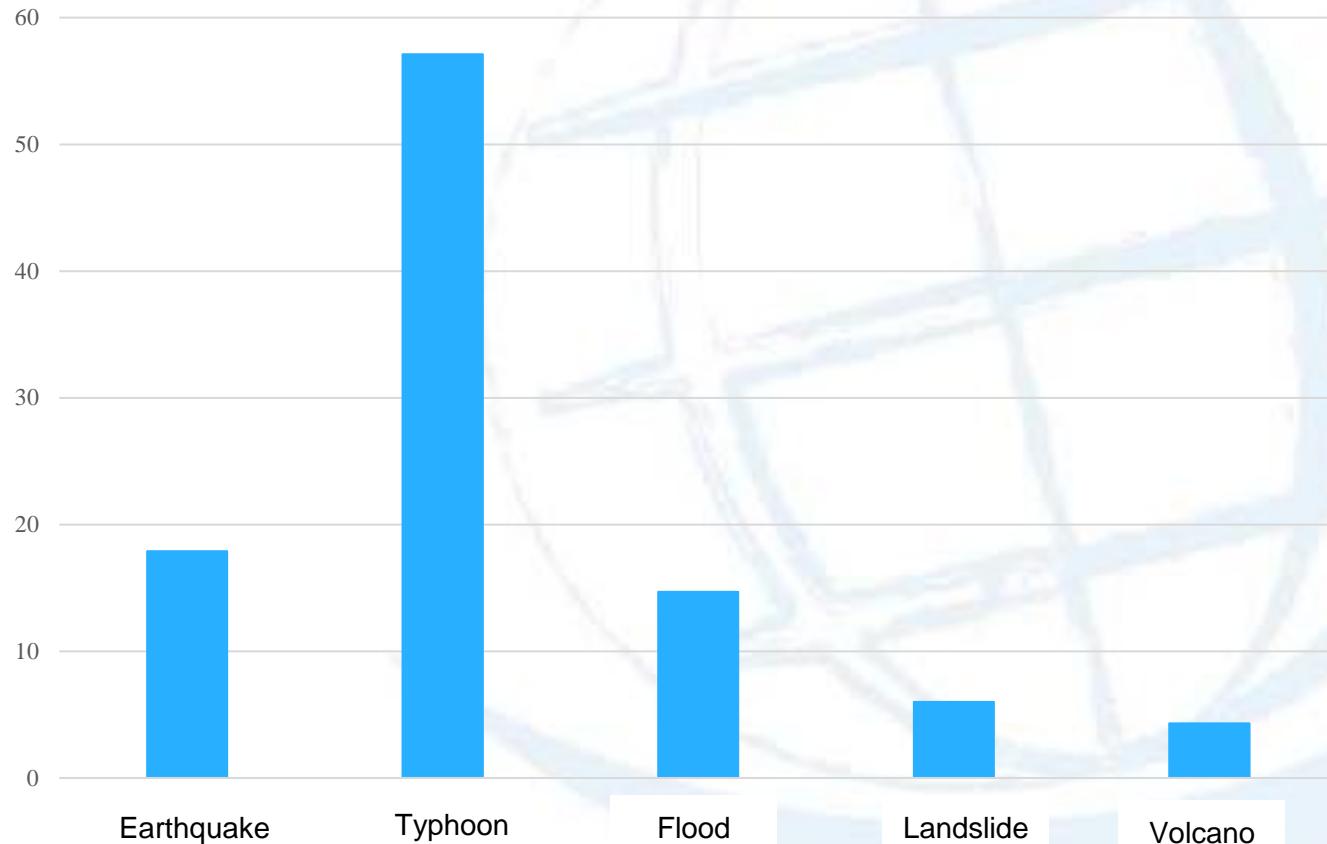

[Maintenance of a circuit breaker]

Electrical accidents caused by disasters

Electrical accidents caused by disasters

Ratios of the number of occurrences of natural disasters in Japan

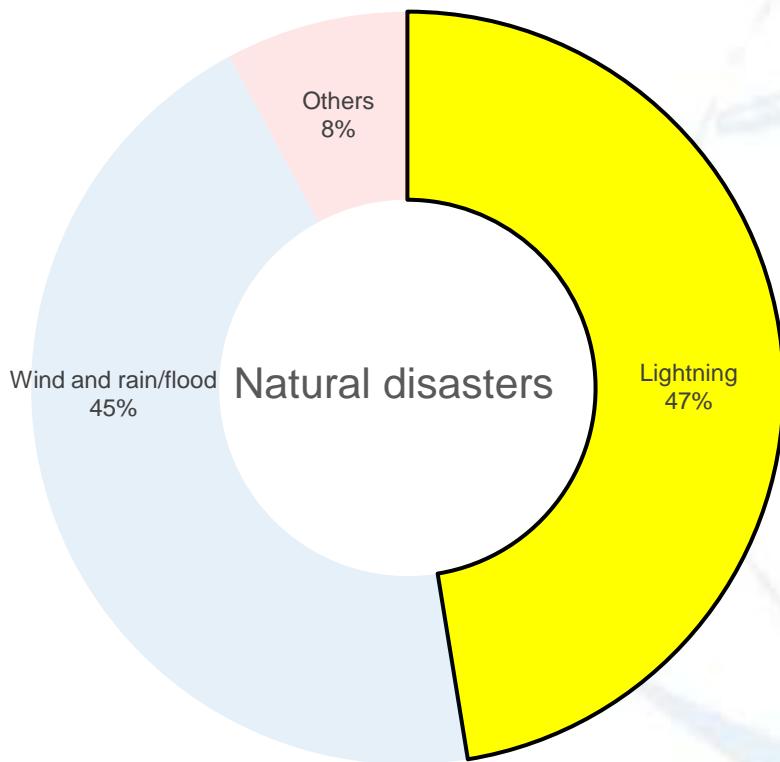

Material: Prepared from the Disaster Database of the Centre for Research on the Epidemiology of Disasters (EM-DAT) of the Université catholique de Louvain (EM-DAT); as of 2018

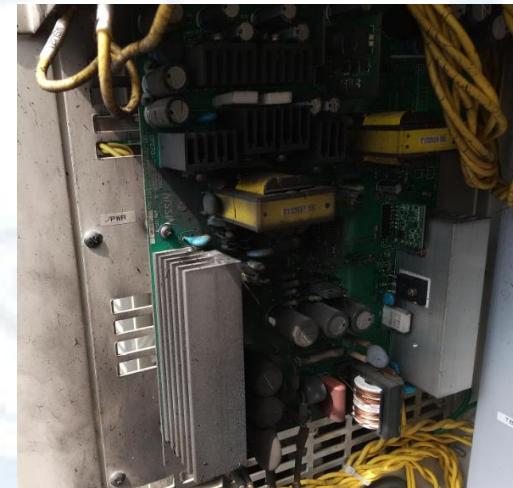

Statistics of 1985–2018

fisuel seminar – 15 and 16 October 2024

Electrical accidents caused by disasters

[Switchgear damaged by a lightning stroke]

[Control circuit damaged by a lightning stroke]

Preventive measures against electrical accidents caused by disasters

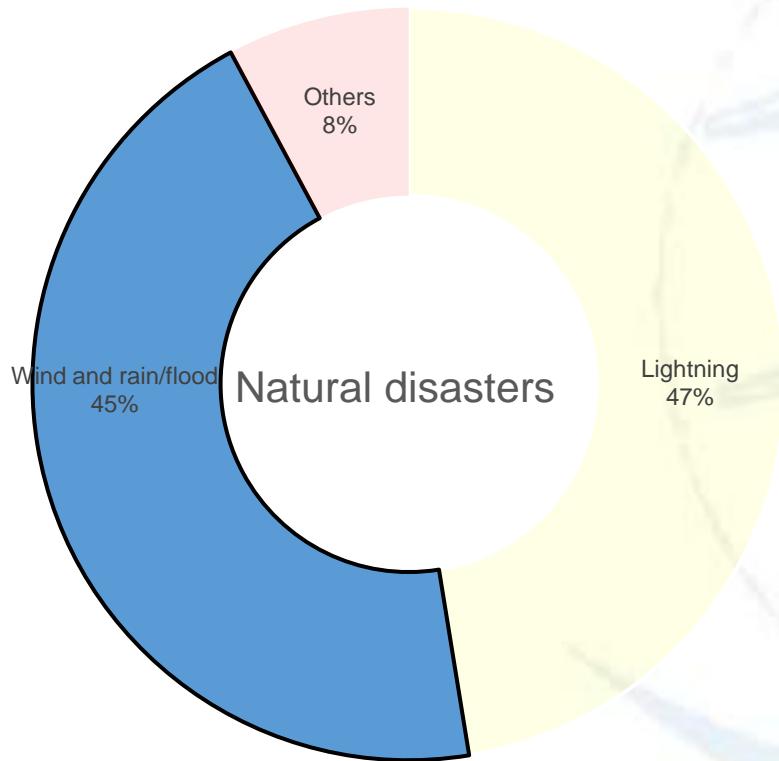

[Installation of a lightning arrester in a high voltage circuit]

[Installation of a lightning arrester in a low voltage circuit]

Electrical accidents caused by disasters

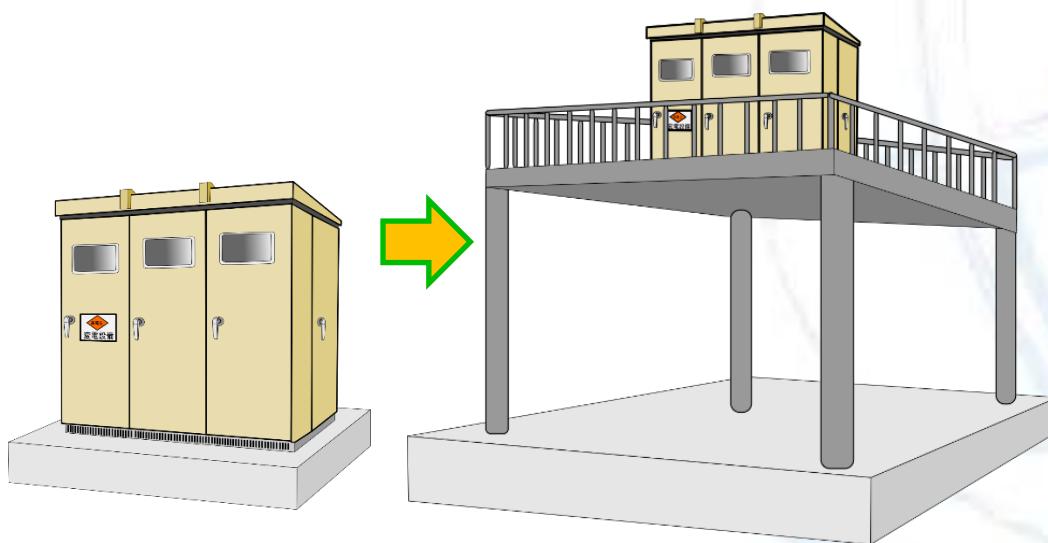

[Motors damaged by a flood]

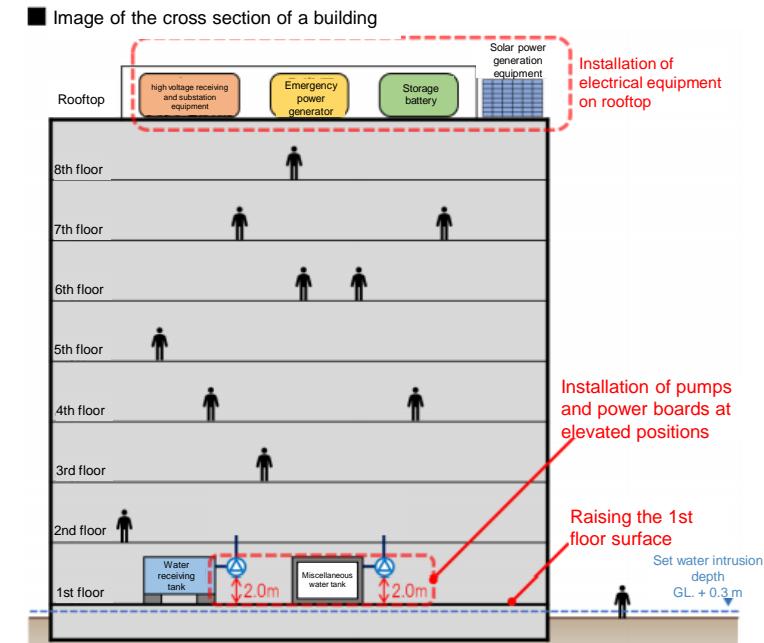

[Circuit breaker damaged by a flood]

Preventive measures against electrical accidents caused by disasters

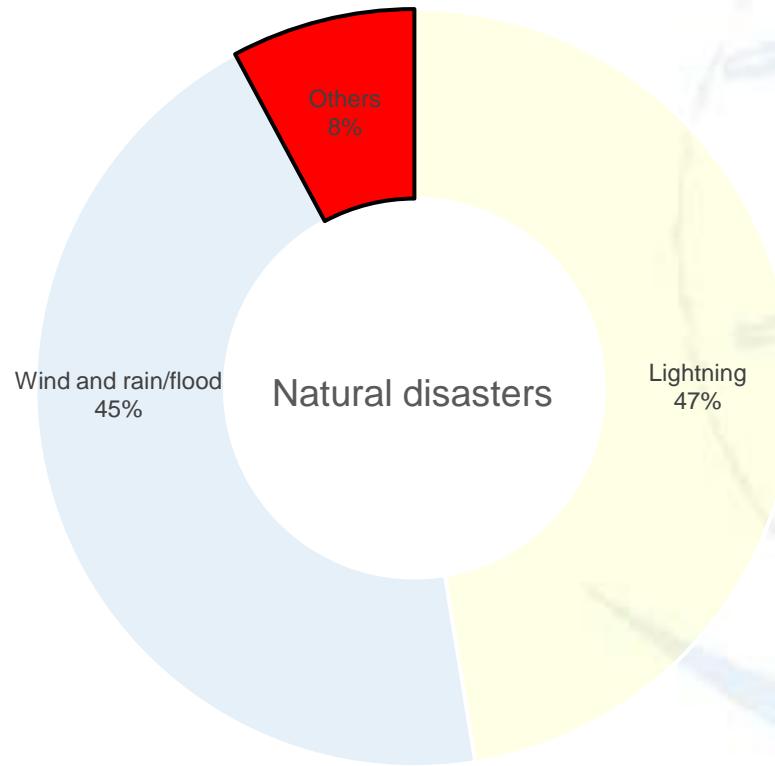

[Elevation of electrical equipment]

Electrical accidents caused by disasters

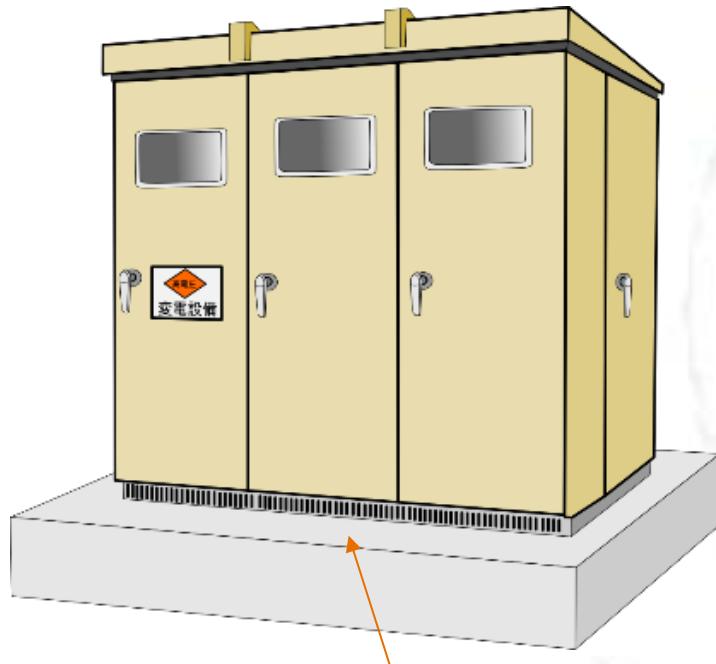

[Substation equipment damaged by an earthquake]

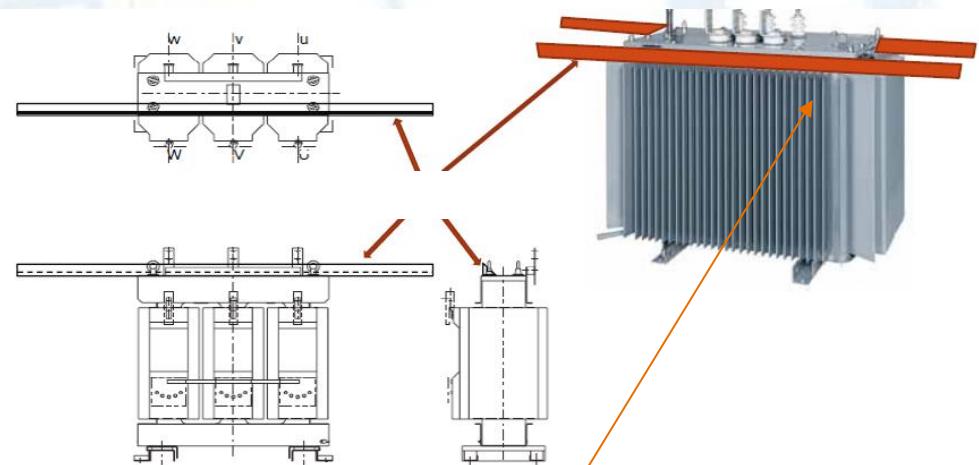

[Air conditioner outdoor unit damaged by an earthquake]

Preventive measures against electrical accidents caused by disasters

Secure the equipment firmly to the foundation

Take vibration prevention measures

Comprehensive measures against electrical accidents

2023年 重点ご説明事項 [8月度]

お客様の感電事故防止について

お客様の電気設備において、お客様ご自身で高圧開閉器を操作されると、重大な事故（感電死傷・波及事故など）につながる恐れがあり大変危険ですので、絶対に操作しないようお願いします。

電気設備を休止させる場合等で、高圧開閉器を操作する必要がありましたら、必ず当協会までご連絡をお願いします。

また、電気室やキューピタル等の施設及び機の保管は厳重に行い、関係者以外の扉の開け閉め、設備内への立ち入りは絶対にしないようお願いします。

感電死傷事故が発生した時は、24時間以内に九州産業保安監督部へ報告が必要となる場合があります。
 速やかに当協会へご連絡ください。また、報告の概要については下記を参照ください。

九州産業保安監督部 ホームページ <https://www.safety-kyushu.meti.go.jp>

作業者の感電事故について

1. もしも感電事故が発生したら
 要故の発生を知った時から24時間以内に、九州産業保安監督部へ報告が必要となります。速やかに当協会へご連絡ください。

2. 埋設ケーブル付近の掘削作業にご注意ください。
 埋設したケーブル付近の掘削作業を行う場合は、事前に埋設箇所の表示を十分確認して、ケーブルに傷つけないように注意してください。（事前に当協会へご連絡ください）

3. 高圧電線付近の作業にご注意ください。
 高圧電線付近で作業を行なう場合は、高圧電線への防護カバー取り付けや電源を切る等の安全対策を実施して作業する必要があります。
 電気工事業者等が施工する場合でも、作業の安全確保の為に作業日程や内容について事前に確認しておく必要があります。（事前に当協会へご連絡ください）

不明な点は、当協会担当者へお尋ねください。

九州電気保安協会では、お客様サポートセンターを設けており、24時間、365日、特に休日・夜間においても、お客様の対応ができる体制をとっていますので、いつでもご連絡ください。
